1. Purpose/Intent

The Medical Transportation program will establish goals and objectives for the program, on a yearly basis, based on its mission and values.

2. Policy Statement

The goal of the Medical Transportation Program is to cover medically necessary services and travel that:

- Address community members' unique health needs.
- Respect community members' cultures and values.
- Ensure the program is available for future generations.
- Close the health gap between first nations and non-first nation health services.
- Focus on wellness and prevention.

3. Procedure

The Norman Recollet Health Centre Medical Transportation Program will:

1. Create focus groups. Focus groups will include Medical Transportation clients and community members
2. Complete a Needs Assessment. The needs assessment will be developed by the Community Wellness Coordinator and Medical Driver. The document will be approved by the Health Director.
3. Prioritize three major needs identified by the focus groups.
4. Work towards the accomplishment of those three goals during the coming year. If we have long range goals, they could span for more than one year.
